

Final Report: How-to

In order to run the code the following requirements must be met:

- run on a POSIX machine

To run the code:

- Navigate to the Main.java file (understandingPaxos/src/com/company/)
 - I understand this does not meet the recommendation of the .jar file; however, in order to access the log files a .jar file is not practical.
- The option to enter number of acceptors and proposers will be given to the user
- On program completion the Shiviz website will be opened
- Navigate to the folder shivizLog (understandingPaxos/) and select the file upload.txt
- On the Shiviz website upload the file "upload.txt"
- The program has been written in a way to automatically append the required regular expression to the Shiviz website
- The Shiviz visualization will now be visible
